Building Methods

Many stock illustrators make changeable pose assets for several characters in the same style.

Lineart can be made from photos, and simplified for specific colors, shapes and needs.

Strategy and Scope

Premade poses, such as Storyline poses, Vyond poses, and ELB illustrated characters are the simplest to use and modify.

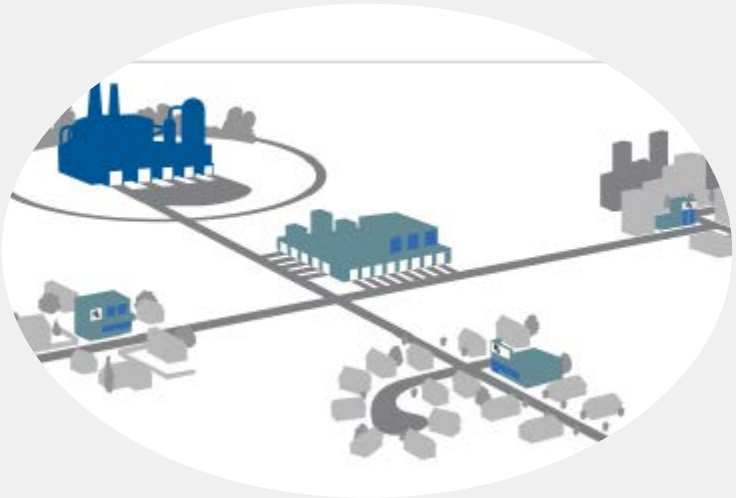

Stock illustration can be found and used as is, or modified, in colors and positions.

Custom illustration is made on demand, so it takes longer and requires source images and defined styling.
