

Photo Effects

This presentation contains many sample photo treatments, to be used as special effects consistently applied through courses themed for a particular theme and style. These can be applied in batches, or they can be more carefully and artistically applied to specific images to fit the learning need.

The advantage of using many of these themed effects is a more abstract, storytelling of the learning subject. They are good for compositing many photos together, to make interactions of subjects at will. Scoping is dependent on amount of artistic license taken with the images.

1

Halftone Comic Effect

This treatment can benefit from extra time spent on each image, varying the overlaid lines, handwriting, stains and other effects. This effect puts an illustrative emphasis on the subject of the image, and provides an antique and science notebook style.

2

Antique Rendering Effect

Ooh, Ahh . . . Did this take a long time?

Just a bit of prep time, sizing the source images, then running an action as a batch process.

Awesome!

3 Cartoonica Paint Effect

Similar to the last one, this effect is rougher, more true to the photo source, and a more subtle, grainy effect.

4 Cartoonica Grain Effect

This effect requires a selection of the subject, and obscures the background, applying a playful brushstroke and bright splashes of color, for a spontaneous and fun treatment.

5 Digital Paint Effect

This effect also requires a selection of the subject, and abstractly effects the background, applying brushstrokes and sketched elements, for an illustrated vignette style.

6 Fashion Drawing Effect

This one is very subtle, and provides reality with a slightly graphic twist.

7 Subtle Graphic Effect

A very painterly effect

8 Oil Painting Effect

A more painterly effect, distorting the subject. This actually occurs with smaller source images, using the previous effect.

9 Oil Paint Distortion Effect

A very abstract and modern grunge effect.
May be a niche that fits you.

10 Spray Angles Effect

Good for obscuring details or faces, while abstracting the photo sources into an artistic watercolor-like treatment

11

Posterizer Effect

Custom effects for many other themes can be created on request, mixing from these or trying other options as needed.

12 Illustration Effect

Largely obscuring the subject, this effect has limited, but very interesting uses. Again, this one relies on a preliminary selection.

Smooth watercolor

Graphic Cartoon

Action Movie Colorized

Halftone dots

Etching subtle

Steampunk Sepiatone

Golden Statue
